DIY UV Resin Kit

QUICK START & SAFETY GUIDE

KAIZEN - MINDFUL CRAFTING

⚠️ SAFETY FIRST!

- **Nitrile Gloves:** Protect skin from uncured liquid resin to prevent irritation or allergic sensitization.
- **Work Area:** Lay down Silicone Mat; work in a well-ventilated space away from direct sunlight.
- **P2V Mask:** Charcoal layer blocks chemical vapors (VOCs). Keep on while resin is open or lamp is on.
- *We recommend consulting with a doctor if you have lung and skin sensitivities as liquid resin carries risk.*

> 🚫 **THE "NEVERS"**
>
> 1. **NEVER** use alcohol to clean off your skin. Wash them with water and soap.
> 2. **NEVER** touch your face, phone, or hair while wearing resin-covered gloves.

📦 WHAT'S INCLUDED

- Safety gear (Mask & Gloves)
- 1x UV Resin bottle
- 1x Round Mold
- 2x Toothpicks
- 1x Dried Flowers pack
- 1x Mini Silicone Mat
- 1x UV Curing Light
- 2x Small Mixing Cups
- 1x Fine Glitter pack
- 1x Pair Earring Findings

Tips & Techniques

💧 1. The Pour (Bubble Control)

- **Slow & Low:** Pour down the side of the mold to avoid bubbles.
- **Bubbles:** If you get bubbles pop them with the toothpick before curing. If you have Isopropyl alcohol, do ONE fine spritz to pop bubbles. Not too close and not too much as it can make the resin cloudy and "bumpy". **DO NOT USE ANY OTHER ALCOHOL AS THEY ARE FLAMMABLE.**
- **Wait:** If you use Isopropyl alcohol, wait 30 seconds for the alcohol to evaporate before curing.

☀️ 2. The Cure

- **UV Lamp:** Place under the light for 2–4 minutes. Sticky? Give it more time under the UV light.
- **The Flip:** Turn the mold over; cure the bottom for 2 more minutes.
- **Hands Off:** Let it cool for 5 mins. Touching early = permanent fingerprints.

Step-by-Step Instructions

1. **Set Up Your Workspace:** Lay out the Silicone Mat on your table to keep your work surface protected and clean.
2. **Place Mold & Wear Safety Gear:** Place the mold on your mat and put on your safety gear.
3. **Decorate:**
   - Pour a small amount of UV resin into the mixing cup, add glitter, and stir thoroughly with a toothpick. Carefully pour the glitter mixture into the mold just a quarter full, then place the flowers.
   - **Cure.**
   - Once cured, fill the mold with clear resin and **cure again**.
   - Repeat to do the second earring.
4. **Findings:** Open the clasp with your hand (can use pliers - not included - if necessary), put the resin cast in the middle then pinch back to secure. Do the same with the other earring.
5. **Enjoy!**
