

How to Safely use Incense

1

Choose a Safe Location:

Place your incense burner in a sturdy, heat-resistant and flat surface. Make sure the incense stick is properly placed. Keep away from drafts, curtains, and flammable items.

2

Light Safely:

Light the tip until it catches flame, let it burn for 5–10 seconds, then gently blow it out so it glows red and releases fragrance.

3

Ventilation:

Always burn in a well-ventilated room. Avoid inhaling smoke directly.

4

Mindful Use:

Discontinue use if eye or respiratory irritation occurs. Keep incense sticks away from pets and children.

Safety Rules

Clean up:

Ensure the ember and ash are completely cool before disposal.

Safety Warning:

Never leave burning incense unattended. Keep out of reach of children and pets.

How to Safely use a candle holder with a Tea Light

1

Choose a Safe Location:

Place the tea light on a stable, flat, heat-resistant surface away from drafts, vents, or air currents to prevent rapid burning or soot. Never burn a tea light directly on furniture.

2

Light Safely:

Use a long match or a long-neck lighter to light the wick, keeping your hands and clothing away from the flame.

3

Extinguish Properly:

Use a candle snuffer or gently blow out the flame without splashing liquid wax. Allow the wax to fully cool and solidify before moving or touching the tin.

4

Draughts:

Avoid burning near open windows or fans. Draughts cause uneven burning, dripping, and excess smoke.

Safety Rules

Liquid Wax Hazard:

Do not move the candle while it is lit or while wax is still liquid.

Water Warning:

Never use water to extinguish a wax fire, explosive reaction or liquid wax splash.
